

## The Maryland State Highway Administration (SHA)

### 2015 Road Ready e-Brochure

*MD 18 Drawbridge (foreground), US 50 Kent Narrows Bridge (back), Queen Anne's County*

Spring and summer in Maryland offer a wide variety of recreational opportunities easily reachable by a short road trip. These seasons also offer the best weather for road construction. To keep your road trip from turning into a slow-moving construction tour, the State Highway Administration (SHA) created “e-Road Ready,” a listing of major projects across the State to help motorists remain aware of construction zones.

#### Work Zone Safety

In addition to the major projects listed, you may also encounter mobile or short-term work zones. Always expect the unexpected, pay extra close attention and drive slowly through any work zone. Whether it's a tree trimming operation or a bridge project, be aware when orange is there: **Think Orange** (the color of construction equipment and signs), stay alert and slow down. Everyone is at risk.

In fact, in four out of five work zone-related crashes, it is the driver or passenger who is injured or killed. In 2014, nine people lost their lives in Maryland work zone crashes, including four highway workers. Over the last five years, there were more than 8,000 work zone related crashes in Maryland, which resulted in the injury of more than 3,600 people. At the end of the day, we want everyone to get home safely.

Thousands of people work behind barrels in work zones with only a safety vest and a hard hat to protect them. For your safety and the safety of highway workers, speed limits in certain work zones are photo enforced through the SafeZones program.

Real-time travel information is available for free by using Maryland 511. Motorists should call 511, 1-855-GOMD511 or visit [www.md511.org](http://www.md511.org) for current travel information. Sign up to personalize travel route information through MY511 on the website. Remember to use 511 safely – Maryland law prohibits hand-held mobile phone use and texting while driving. Citizens can also follow SHA on the social networks. Follow us on [Facebook](#) and [Twitter](#).

## Before You Go, Make Sure Your Vehicle is *ROAD READY*

**Tires** – Visually check all tires to ensure there is no obvious damage. Check tire pressure before hitting the roadway. Tire treads should have deep grooves. To check, insert a penny into the groove with Lincoln's head facing down. The tire should reach the top of Lincoln's head.

**Battery** – Batteries don't last forever. If your battery is getting old, a vacation in hot weather is the worst time to find out if there is not enough battery power remaining. If your battery is more than four years old, it may be beneficial to purchase a new one.

**Belts** – Check the main serpentine belt of your vehicle for signs of damage or excessive wear.

**Brakes** – Inspect vehicle braking systems, and listen for any noise while driving that might indicate a warning that brake pads are worn.

**Hoses** – Visually inspect cooling hoses through the engine compartment. Look for weak spots or any drip of coolant flowing from the connection to the radiator. Feel the hose to make sure it is firm and not spongy.

**Headlights** – Test your low and high beams. Also check brake lights and turn signals to ensure proper operation.

**Timing Belt or Chain** – Be sure to read the owner's manual for your vehicle to determine when a timing belt or chain should be replaced. If it's getting close to replacement time, it may be a good idea to have it done before hitting the highway.

**Fluids** – Make sure your vehicle coolant level is at its appropriate levels. A lower reading in the reservoir may indicate a slow leak. Power steering and brake fluid reservoirs should also be at appropriate levels. Above all, make sure motor oil is the correct grade as recommended by the vehicle manufacturer and it is clean and at the correct level.

**Gas** – Make sure that you have a full tank of gas before longer trips.

**Oxygen Sensor** – This is a leading cause for "Check Engine" lights to come on. The O2 sensor helps ensure the most dynamic operation of an engine.

## A ROAD READY Vehicle Can Save Green

**Get the junk out of your trunk:** Removing extra items from a vehicle saves gas. Every 100 pounds in a vehicle can reduce miles per gallon by up to two percent.

**Keep tires properly inflated:** Keeping your tires properly inflated translates into a free tank of gas a year and reduces CO2 emissions too. You can also consider purchasing fuel-efficient tires.

**Change your oil:** Improve your fuel economy by one-to-two percent by using the manufacturer's recommended grade of motor oil.

**Replace your air filter:** According to the US Department of Energy, replacing a clogged air filter can increase your mileage by 10 percent.

**Tighten your fuel cap:** Tightening gas caps can save as much as 30 gallons of gasoline which could be lost annually to evaporation.

**Reduce aerodynamic drag:** Removing luggage racks, roof-top carriers, and ski racks when they are not needed cuts down on drag so the motor does not have to work as hard.

**Travel at off-peak times:** Leaving during off-peak hours can help reduce time sitting in traffic, which will limit vehicle idling time saving gas and cleaning the air.

**Cruise control:** Using cruise control will improve fuel economy by seven percent.

**Consistent Speed:** Rapid acceleration, speeding and hard braking reduces miles per gallon by up to 33 percent at highway speeds.

**Speeding:** Slow down. Every mile per hour over 60 MPH costs an average of 24 cents per gallon.

**For real-time information of Chesapeake Bay Bridge conditions, call 1-877-BAY-SPAN**

## **Important Laws in Maryland to Remember**

**(Click on name of law for link for more information)**

### **Move Over Law**

Maryland law requires drivers approaching a stopped emergency vehicle including tow trucks on a highway to slow down and safely change lanes away from the emergency vehicle. This should only be done if another lane in the same direction is available and the move can be made safely without impeding other traffic. Best practice is to move over for workers and disabled motorists as well.

### **Seat Belts**

Buckle up – all seats, all ages. As of October 1, 2013 – everyone in all seating positions (even the backseat) must wear a seat belt or be placed in an appropriate child safety seat. Children under the age of 16 must be secured in a seat belt or child safety seat. Visit [mdkiss.org](http://mdkiss.org) or call 1.800.370.SEAT (7328).

### **Cell Phone Use/ Texting and the Dangers of Distracted Driving**

Distractions can be deadly - concentrate on driving! Hand-held mobile phone use and texting are illegal in Maryland. As of October 1, 2013, hand cell phone use is a primary offense, and drivers can be cited for hand-held cell phone use alone.

### **Everyone share the road – everyone gets home**

Stop for pedestrians in crosswalks and intersections. Share the road with bicyclists and give three feet of passing space. Save a life – look twice for motorcyclists. And be alert for the “No-Zone” - blind spots around large commercial trucks.

### **Always drive sober**

Maryland police strictly enforce drunk and drugged driving laws. In Maryland, you can be arrested for DUI with a Blood Alcohol Concentration (BAC) of .08 or DWI with a BAC of .07.

**Call 911 for emergencies and #77 for disabled vehicles or assistance.**

## **Resource Page**

### **Maryland 511**

Maryland now features FREE 511 traveler information! Call 511 or 1-855-GOMD511 or visit: [www.md511.org](http://www.md511.org) for current travel information. Sign up to personalize travel route information through MY511 on the website. Remember to use 511 safely - Maryland law restricts hand-held mobile phone use and texting while driving.

### **Maryland Safe Zones**

The goal of the *SafeZones* program is to reduce the speed of vehicles in advance of and through work zones to prevent crashes and injuries and save lives – the lives of highway workers and travelers. In four out of five work zone crashes, motorists and passengers, not highway workers, are injured or killed. Please partner with us in building safer Maryland roads – please drive safely and obey the posted speed limit in construction work zones.

### **CHART (Coordinated Highway Action Response Team)**

CHART is a joint effort of the Maryland Department of Transportation, Maryland Transportation Authority and the Maryland State Police, in cooperation with other federal, state and local agencies. CHART's mission is to improve "real-time" operations of Maryland's highway system through teamwork and technology.

### **I-95 Corridor Coalition**

The I-95 Corridor Coalition is an alliance of transportation agencies, toll authorities, and related organizations, including public safety, from Maine to Florida, with affiliate members in Canada. The Coalition provides a forum for key decision and policy makers to address transportation management and operations issues of common interest.

### **I-81 Corridor Coalition**

The I-81 Corridor Coalition is a collaborative group of stakeholders that highlight safety, freight management, technical and environmental advances along the I-81 corridor through New York, Pennsylvania, Maryland, Virginia and Tennessee. The Coalition provides a forum for key decision and policy makers to address transportation management and operations issues of common interest.

### **American Association of State Highway and Transportation Officials (AASHTO)**

The American Association of State Highway and Transportation Officials (AASHTO) is the voice for transportation and a catalyst for organizational and technical excellence. AASHTO advocates for transportation-related policies and provides technical services to support states in their efforts to efficiently and safely move people and goods.

### **American Traffic Safety Service Association (ATSSA)**

ATSSA represents the road safety, traffic safety, and highway safety industry with effective legislative advocacy, traffic control safety training, and a far-reaching member partnership. Let's move toward zero deaths on our nation's roads.

## **Maryland State Police**

The Maryland State Police is the model of a responsive, coordinated, composite statewide police department; independent yet supportive of allied law enforcement agencies. It is committed to the utmost professionalism in delivering all-encompassing police services focused on traffic safety, homeland security, crime reduction and criminal apprehension. It continually strives to develop the skills of its members and to efficiently and effectively manage our resources as they carry out their public responsibilities.

## **Maryland Scenic Byways**

Take the roads less traveled - including byways featuring nationally significant themes: the Star-Spangled Banner, Harriet Tubman Underground Railroad, Religious Freedom, Chesapeake Country, Charles Street, Historic National Road and the Catoctin Mountain National Scenic Byways. Maryland's 19 designated byways encompass 2,487 miles of beautiful roads and offer a taste of Maryland's scenic beauty, history and culture.

## **Keep America Beautiful**

Keep America Beautiful follows a practical approach that unites citizens, businesses and government to find solutions that advance core issues of [preventing litter](#), [reducing waste](#), and [beautifying communities](#).

## **Toll Rate Calculator (Maryland Transportation Authority)**

**[Click here](#) to calculate a toll.**

## **Road Ready Glossary**

**Abutment:** A part of a bridge structure that holds the steel or concrete bridge beams.

**Bridge replacement:** Complete replacement of a bridge.

**Bridge deck replacement:** The entire bridge driving surface is replaced.

**Bridge deck overlay:** The top layer of the riding surface pavement is replaced.

**Bridge deck sealing:** Material applied to bridge deck to protect against moisture and corrosion.

**Bridge cleaning and painting:** Cleaning existing metal bridge beams, removing old paint and applying new paint to protect metal from corrosion.

**Bypass:** A roadway built around a town/city designed to carry a majority of through traffic outside of town/city limits.

**Culvert:** An opening under a roadway, usually enclosed with concrete; drains water from one side of the road to another.

**Drainage/water quality improvements:** Addition of inlets, culverts, and storm water management ponds. Drainage involves removing water from the roadway and preserving water quality before it flows into the environment.

**Geometric/Intersection improvements:** Improvements designed to enhance safety and traffic flow; may include turn lanes and ramps.

**Interchange:** Interconnecting roadways that allow free movement between two or more roads.

**Ramp:** A directional turn movement that carries traffic from one roadway to another highway.

**Reconstruction:** The rebuilding of a road's foundation and surface.

**Resurfacing/overlay project:** The application of new pavement on an existing road.

**Slope:** An embankment adjacent to the highway.

**Sound Barrier/Wall:** a wall that separates and deflects highway noise near residences.

**Streetscape:** A localized highway project on a secondary highway. Normally located in towns and municipalities and includes sidewalks, drainage improvements and lighting.

**Widening:** The addition of lanes or sidewalks as part of highway project; may require the acquisition of rights-of-way.
